

CUSTOMER LIFETIME VALUE (CLTV) PREDICTION FINANTIAL PLANNING

BRL 91.7 K

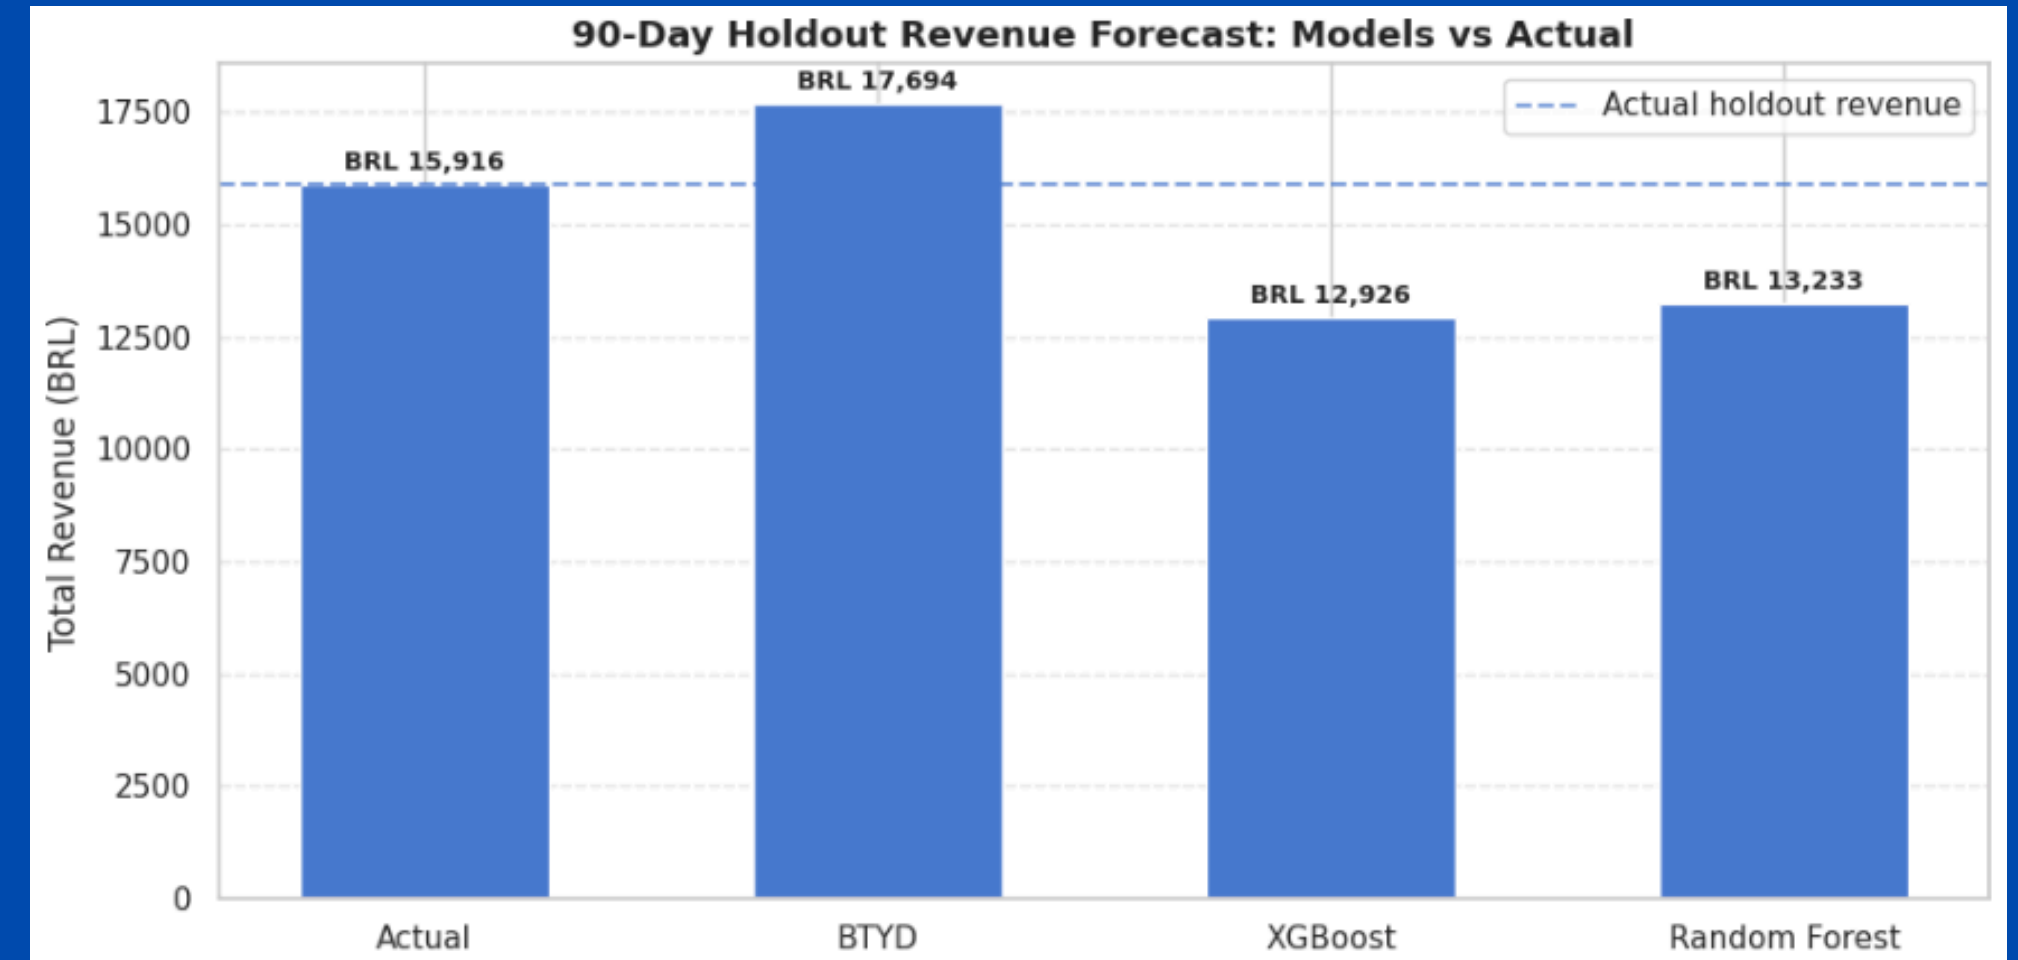

estimated total 90-day customer value,
across full customer base, BTYD
prediction

97%

of customers are one-time buyers

75,319

customers covered

Validation performed on the holdout customer subset

MODEL CHOICE

BTYD

for Budget Forcasing

- **Aggregate forecast closest to actual revenue: BTYD overestimates by 11%.**
- **Interpretable outputs: expected purchases, predicted value, probability alive.**
- **Best fit for quarterly CLTV-based budget planning.**

CUSTOMER PRIORITY SEGMENTS

High Value Active

17,561 customers | Total CLTV: BRL 45.6k

Customers with high predicted 90-day CLTV and strong activity signals. They are valuable customers who should be protected through retention actions.

Win-Back Priority

1,269 customers | Avg CLTV: BRL 14.44

Customers with high predicted value but weaker activity signals. They are the main target for reactivation campaigns.

Low Value Active

56,256 customers | Avg CLTV: BRL 0.49

Customers who still appear active but have low predicted short-term value. They should receive low-cost engagement only.

Low Priority

233 customers | Total CLTV: BRL 169

Customers with low predicted value and weak activity signals. They should not receive expensive marketing incentives.

RECOMMENDED CAMPAIGN STRATEGY

1

Win-back Campaign

Personalized reactivation offers, limited-time discounts, reminder emails

- **Top third CLTV third** – strong personalization offer
- **Middle CLTV third** – discount voucher / loyalty incentive
- **Bottom CLTV third** – Low-cost email reminder

2

Premium Loyalty Campaign

Target: Top 2% of High Value Active

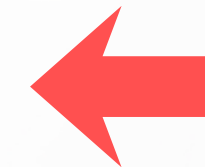

VIP perks, early access, free shipping, exclusive offers.

3

Low-Cost Retention

Target: Active customers outside the premium group

Personalized recommendations, email reminders, product suggestions.

Key takeaway: Reserve expensive incentives for small, high-value groups; use low-cost communication for the broader base.
